Technical details

Weight:	0,10 kg
Maximum payload:	12 kg

Description

The foam grid insert is suitable for all metal cases and enables a secure transportation of valuable spare parts or sample products. The pre-perforated material can be easily adapted to the workpiece by detaching individual foam blocks and so provides the highest possible level of protection during transport. In order to fill the case completely, two foam grid inserts are required, side by side.

Depicted cases are only for demonstration purposes and are not included in the scope of delivery.
